

CITIZENS FOR SPACE EXPLORATION

The First Woman and Next Man on the Moon

Who We Are

American taxpayers, community leaders, and university students committed to continued national investment in space exploration.

COMPLETE our Artemis mission hardware including the spacecraft (Orion), heavy-lift rocket (Space Launch System-SLS), and exploration ground systems to send humans on deep space missions beyond Low-Earth Orbit (LEO) to the Moon and on to Mars. Finish the development and begin use of the Exploration Upper Stage on SLS, second Mobile Launch Platform, Gateway Components, and the Human Landing Systems. These systems will enable the Artemis III mission to return Americans to the lunar surface safely and a sustainable Moon and Mars program into the future.

UTILIZE the International Space Station (ISS) as a world-class laboratory. Extend the ISS mission to 2030 to conduct research and science that is critical to deep space exploration and sustaining human presence in space. The ISS is critical to the development of commercial activities in LEO.

SUPPORT NASA's commercial crew and cargo transportation to the ISS to ensure U.S. human launch capabilities and a full crew on-board the ISS.

PROVIDE robust funding to allow NASA to achieve these objectives and continue its role as an economic driver for the U.S.

Robust American Investment

in space exploration is needed at a time when other countries are rapidly expanding their space programs.

What This Means for America's Future

LEADERSHIP

Ensures national security and America's preeminence in space

EDUCATION

Promotes Science, Technology, Engineering, and Math (STEM)

INNOVATION/JOB

Stimulates new high-tech industries, creating hundreds of thousands of high-skilled, well-paying jobs

HEALTH CARE

Advances medical-related and life science research

QUALITY OF LIFE

Generates life-changing benefits from space technology

All of this for less than 1/2 a penny of every dollar spent on the federal budget.

America's Artemis Program Systems

Orion

Space Launch System

Lunar Gateway

Human Landing Systems

International Space Station

Commercial Space Systems

SpaceX Dragon

Boeing Starliner

Charting a New Future in Spaceflight

America has made significant progress in manufacturing, testing, and launching key components of the Orion spacecraft, Space Launch System, commercial vehicles, as well as more scientific work aboard the ISS, all of which are helping make the Artemis program and deep space exploration possible.

Orion Artemis II Crew Module Assembly at NASA KSC

SLS Mobile Launcher

SLS Core Stage Green Run Tests Critical Systems For Artemis I

SLS RS-25 Engine Testing Complete & Four Flight Engines Installed on Artemis 1 Core Stage

Orion Launch Condition Simulation for Crews

Resource Development aboard the ISS

Orion Artemis I Completed

Boeing Starliner Flight Test 1 Complete

Orion Artemis III Spacecraft Work at NASA Michoud

Did You KNOW?

China is aggressively developing its heavy lift capabilities to send humans to the Moon and beyond, significantly advancing its ambitions to become the predominant, global leader in space.

- China is also developing a space station for LEO and seeking the collaboration of our international partners.
- America must lead to retain our international partnerships, promote our values, and ensure that space remains peaceful, free, and accessible.

ISS 20

20 Years on the International Space Station

Continue Research
Aboard the ISS

Proteins crystallized on the ISS have aided research into treating Duchenne's Muscular Dystrophy (DMD)

ISS-RapidScat's near-surface wind speed data has provided better weather warnings which help reduce risk

Materials testing in the harsh environment of space will benefit a variety of industries including aerospace, automotive, energy, transportation, and aeronautics

Wound repair research in microgravity is helping develop antibiotic wound dressing technology that can prevent sepsis

Medical research to reduce human health and performance risk for exploration

FOR THE
BENEFIT
OF ALL
